

NATUREROLL

Overwintering jute

Give your plants the assurance to withstand the cold and winter weather with this natural and 100% biodegradable protection: the Natureroll jute fabric protection. Simply wrap your plants and shrubs from the base to the top to protect them effectively.

Benefits

Protects plants, trunks and pots from cold, wind and snow. 100% biodegradable.

Characteristics

Made of woven jute fibres.
200 g/m².
1 x 10 m roll.
It is important to note that our overwintering covers do not protect frost-sensitive plants from freezing.
It is recommended to check the fabric cover from time to time and, at the same time, air it out slightly. To prevent rotting, make sure that the fabric is not sticking too tightly to the plants.
