BIRDY OBELISK

A curved metal structure, topped by a bird

Dedicated to border climbing plants, this obelisk with a sleek design will give verticality to your garden! And if your plant grows well, only the little metal bird on the top will be visible.

Benefits

A curved metal structure, topped by a bird. To plant in a border or pot. Its form makes it very stable to withstand the weight of the plants. It is particularly suitable for roses, jasmines, Passionflower and other climbing plants.

Characteristics

Steel, round tube diam 10 mm. stems
Figurine of welded cast iron. Available in 2 heights. Fast to install, requires assembly.
