

FILM BIOCONTROL

Forcing anti-insect film

UV RESIST · 100% Recyclable · PE

BIOCONTROL FILM provides a dual function: protection of crops against insects without the use of chemical treatments and a forcing effect for improved growth. Permeable to water and air thanks to its micro-perforation.

Benefits

This honeycomb film provides a two-fold function: crop protection against insects, and forcing effect. Permeable to water and air. A cost-efficient multiple-use product for ecological protection of crops (carrots, cabbage, turnips, etc.).

Characteristics

Micro-perforated polyethylene film 40 g/m². Thickness 0.30 microns. Treated with UV protection.
